FLACOblue100 Basic

– 100 liter tank
– with integrated filling system
– compact and agile for the workshop floor
– low center of gravity
– TÜV approved nozzle

FLACOblue100 Basic

mobile dispenser for AdBlue® in car workshops

The FLACOblue 100 is the latest mobile tank system by Flaco, specially developed for the AdBlue refilling of passenger cars in car repair shops. Compared to the manual refill from small containers this system is much more economical.

It is equipped with a compact 100 liter tank.

Grid-independent

Thanks to the built-in battery, the device can be operated independently of the mains - a power or compressed air connection is not required during use. This means that the FLACOblue is ready for use anytime, anywhere and the time for the refilling process is significantly reduced. A charge level indicator in a large VGA-display informs at any time about the condition of the battery and indicates early, if the battery must be recharged with the integrated charger.

In addition, the display shows:

–   Total amount dispensed
–   Amount of last car refill
–   remaining tank content
–   Quick-Fill function

The FLACOblue 60 has a pump with an adjustable delivery rate of up to approx. 7 l / min.

Self filling from big bulk

The tank system is equipped with a self-filling system via CDS adapter and allows automatic self-filling with AdBlue from standard 200L drums or 1000L IBC with CDS suction port.

Technical data

Length	60 Liter
Type of tank	for 60 liter barrel or 100 liter tank
Nozzle	Quadro-sonsor controlled nozzle ZV10.2A Basic
Verifiable acc. to Weights & Measures (MID)	MID-calibrateable
Delivery rate	max. 7 Liter / min
Pump	Membrane pump, self-priming, with pressure switch
Diameter hose	19 mm
Length hose	approx. 2,5 m
